Dry ice blasting is a new form of non-abrasive blasting for industrial cleaning applications. Dry ice blasting uses compressed air with high velocity nozzles and pelletized dry ice for safe, less abrasive surface cleaning.

**USES & BENEFITS**
- Faster and more thorough cleaning.
- Non-flammable, non-abrasive, non-conductive, non-toxic removal methods.
- No clean-up of chemicals and solvents, dry ice simply sublimes into the atmosphere.
- Equipment can be cleaned in place requiring no disassembly.
- Thermal-kinetic removal effect is ideally suited for the aerospace and food industries.
- Lower abrasion is perfectly suited for mold removal and remediation and plastic molding removal.
- Approved by the EPA, FDA and USDA

**INDUSTRIES & APPLICATIONS**
- Food and Beverage Processing
- Roof & Fin Fan Cleaning
- Historical Restoration
- Printing & Plating
- Weld Preparation & slag removal
- Aerospace
- Fire & Smoke Restoration
- Marine
- Rubber
- Utilities & Nuclear
- Automotive
- Foundry
- Mass Transit
- Wood, Brick and Plastic
- Pharmaceutical Equipment

**NON-ABRASIVE CLEANING**

**DRY ICE BLASTING**
